### WATER QUALITY STATEMENT:

The fact that water is potable is no guarantee that it is suitable for coffee machines. Your water supply must be within these general guidelines:

**SUPPLY PRESSURE:** 30-70 psi

**HARDNESS:** 2-3 GPG (1 grain of hardness = 17.1 ppm)

Water entering the machine should have a water hardness level of 2-3 GPG at all times. If the water supply is not within this range, a dedicated water softener (if above 3 GPG) or mineral addition cartridge (if below 2 GPG) is required for the coffee machine to operate properly over time (see Rancilio Group North America Water Quality Statement for further details).
